CLAIMS AMENDMENTS

- 1. (Previously Presented) An apparatus for generating an angular sweep of a directed propagation of electromagnetic radiation, comprising:
 - a first reflector adapted to move over a first angular range of movement; and
- a first and a second fixed reflector to reflect the directed propagation of electromagnetic radiation incident upon and reflected by the first reflector onto the fixed reflectors and back to the first reflector;

the first fixed reflector is contiguous with the second fixed reflector and the first fixed reflector is angled with respect to the second fixed reflector;

wherein the first angular range of movement of the first reflector creates an increasing sweep of the directed propagation of electromagnetic radiation with each reflection from the first reflector.

- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Previously Presented) The apparatus of claim 1, wherein the directed propagation of electromagnetic radiation is selected from the group consisting of a laser beam, microwave energy, visible light, non-visible light, infra-red radiation, radar waves, radio waves and combinations thereof.
- 5. (Previously Presented) The apparatus of claim 1, the first reflector and the at least two fixed reflectors are mirrors.
- 6. (Original) The apparatus of claim 5, wherein the mirrors are planar.
- 7. (Original) The apparatus of claim 1, wherein a means for oscillation drives the movement of the first reflector.
- 8. (Original) The apparatus of claim 1, wherein the movement of the first reflector is adapted to have a variable amplitude.
- 9. (Original) The apparatus of claim 1, wherein the movement of the first reflector is adapted to have a variable frequency.

- 10. (Original) The apparatus of claim 1, wherein the movement of the first reflector is adapted to have a variable frequency and a variable amplitude.
- 11. (Previously Presented) The apparatus of claim 1, wherein the distance between the first reflector and at least one of the fixed reflectors is adjustable.
- 12 20.(Cancelled)
- 21. (Currently Amended) The apparatus of claim 19 An apparatus for generating an angular sweep of a directed propagation of electromagnetic radiation, comprising:

a first reflector adapted to oscillate; and

at least two secondary reflectors;

the first reflector and secondary reflectors disposed to create a reflective path onto and off of the first reflector at least twice;

wherein a distance between the first and at least one of the secondary reflectors is adjustable and at least one of the secondary reflectors is adapted to oscillate.

- 22. (Previously Presented) The apparatus of claim 1 wherein the directed propagation of electromagnetic radiation is visible electromagnetic radiation, non-visible electromagnetic radiation, or combinations thereof.
- 23. (Previously Presented) The apparatus of claim 11 wherein at least one reflector is slidable along a track.
- 24. (Previously Presented) The method of claim 14, further comprising the step of illuminating a machine-readable symbology with the directed propagation of electromagnetic radiation.
- 25. (Previously Presented) The method of claim 14, wherein at least one of the fixed reflectors is adjustable and further including the step of sliding the adjustable fixed reflector along a track to adjust the distance between the first reflector and the adjustable fixed reflector.
- 26. (Currently Amended) The apparatus of claim 19 21 further comprising a track, wherein the at least one secondary reflector is slidable along the track to adjust the distance.

10/667989 Page 4 of 6

- 27. (Previously Presented) The apparatus of claim 21 wherein the at least one of the secondary reflectors is adapted to oscillate at a lower amplitude than the first reflector.
- 28 49. (Cancelled).
